MEMORANDUM

TO: Dr. Charles Rohde
FROM: Susan P. Baker *Sue*
RE: Hubert Allen, Jr.
DATE: May 16, 1985

Yesterday Hubert Allen met with the research staff from the Falls in Nursing Homes project, having just performed a variety of analyses for us (Kaplan Meier survival estimates and plots, confidence intervals, various significance tests, anovas, etc.) In less than an hour, he clearly summarized the major results, described the methodology in terms we could all understand and with a good sense of what was most essential, discussed the implications, and recommended subsequent analyses.

My reason for sending this memo is that I was tremendously impressed with his understanding of our needs, the appropriateness of his response, and his skill in explanations. He will be an outstanding teacher and is an unusually nice person to work with. Investigators will value him as a collaborator on future research projects.
